

With all the things you're responsible for ordering, and all the possible vendors you could order them from, how can you possibly keep track of it all?

MLI's Eyeclik™ is our Vendor Management System. It allows your organization to manage your static material such as stationery, business cards, direct marketing and promotional items. With Eyeclik, you can coordinate job creation, processing of orders to vendors and shipment tracking.

You have access to real-time inventory reports based on:

- ◆ Usage per region
- ◆ Vendor success ratios
- ◆ Component coordination

When used in conjunction with MLI's Asset Management system, ordering becomes even easier, because all your digital assets and usage history at your fingertips. When orders are placed, they can be scheduled for delivery to your office or any other locations, or directly to MLI, where we can assemble, repackage, prepare mailings and/or ship products per your instructions.

Whether you are ordering from MLI or other vendors, our Eyeclik system ties everything together into one package to simplify your purchasing process.
